Does your company own or operate air conditioning systems? – Are you operating them illegally?

The Legislation.

From January 2011 the **Energy Performance of Buildings Directive (2007)** made it a legal requirement for all building (commercial and residential) air conditioning systems to be inspected for energy efficiency.

This applies to all air conditioning and heat pump systems that have a capacity of 12 Kw (41,000 Btu/h) or more, either individually or collectively if multiple smaller systems serve a building.

Building air conditioning systems use a significant amount of energy so improving efficiency in this sector is an important element of the UK's strategy for reducing carbon emissions and tackling climate change.

Air conditioning energy efficiency reports **can only** be undertaken by government accredited assessors.

Trent Valley Refrigeration Ltd are accredited Level 3 & 4 Air Conditioning System Energy Assessors.

What to do next.

To comply with this legislation and avoid costly fines contact us now for a no obligation quotation to undertake the required energy efficiency assessments on your behalf.

It is highly likely that potential energy savings will be found and if implemented this will save you money and reduce your carbon emissions making both you and the environment winners.

Are you aware of F-Gas Regulation EC 842/2006? We can also ensure that you are F-Gas compliant.
